Prague, 13 September 2021

Outline

- 1. The Czech household finance and consumption survey
- 2. Assets, liabilities, net wealth an overview
- 3. Patterns by household type:
 - Assets, liabilities participation rates and conditional amounts
 - Debt burden and financial vulnerability
 - Net wealth and gross income
 - Consumption expenditures
- 4. Net wealth inequality: international comparison
- 5. Wealthy hand-to-mouth households

1. The Czech household finance and consumption survey

 Project: Czech National Bank and Czech Statistical Office in cooperation with the ESCB HFCS Network coordinated by the European Central Bank

- Data collection conducted by the Czech Statistical Office
 - Yearly (2020, 2021, 2022)
 - Integration with the EU-SILC and HBS
 - Target: 3,000 households in 3 years
- Fieldwork for HFCS CZ 2020
 - February-December 2020. Completed.
 - 1,555 households in one year
- This presentation: Preliminary results, without weights, without imputations... a first look at the data

- Main asset components:
 - Household main residence
 - Financial assets: deposits
- Asset distributions skewed to the right

- On the data collection side, pretty good item response rates:
 - < 0.3% missing (1-5 obs out of 1,555)
 - < 4.3 % missing for pensions (67 obs)

3.3 Debt burden and financial vulnerability (ratios, %)

- Heterogeneity by housing status
 - Highest DTI for owners with mortgage
 - Highest DTA for renters
- Heterogeneity by net wealth, income
 - Higher debt (in absolute terms, DTI), lower indebtedness (DTA)

3.5 Consumption, annual median expenditures

- Wealthier households consume more in absolute terms and less as share of income.
 - Similar pattern for individual categories (food, utilities, trips and holidays).
- Same pattern is observed for income.
- Owners with mortgage consume less as share of income, but top is absolute terms.
 - Similar pattern for individual categories (food, utilities, trips and holidays).

4. Net wealth inequality

- Net wealth inequality is, overall, high. Top 5%
 European households hold 30-50% of total net wealth.
- In the Czech Republic (along with Slovakia), net wealth inequality is on the lower side.
- Similar pattern using alternative inequality measures.

5. Wealthy hand-to-mouth households

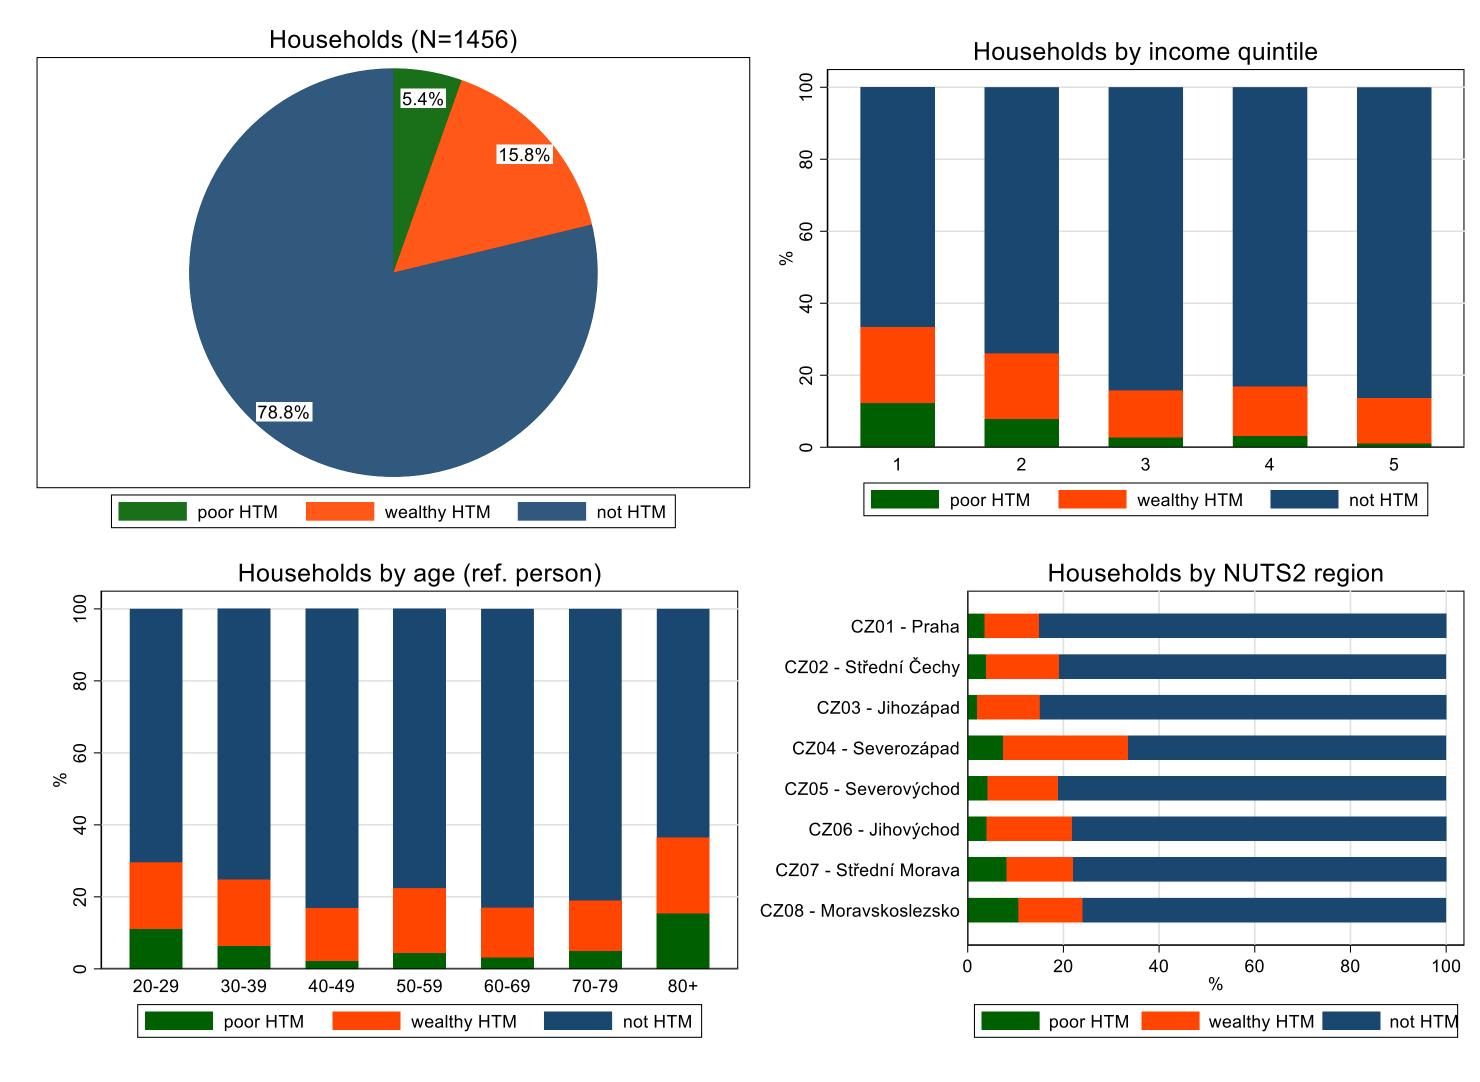

- marginal propensity to consume: how sensitive is household consumption to transitory income shocks?
- "traditional" view:
 - most HH have positive wealth and low MPC due to consumption smoothing (PIH)
 - small number of poor "hand-to-mouth" HH have zero wealth and high MPC
- wealthy hand-to-mouth households: positive wealth but little liquid assets
 - e.g. they own a house but their bank account is empty
 - consumption smoothing harder => higher MPC!
- why should macroeconomists care?
 - proportion of wealthy HTM households will affect aggregate MPC
 - higher aggregate MPC => economy responds more to fiscal or monetary shocks

5. Wealthy hand-to-mouth households

preliminary results for CZ:

- more than one in five households is hand-to-mouth;
 among these, 3/4 have some illiquid wealth
- wealthy HTM spread evenly across income and age categories; some regional variations
- proportion bit lower compared with other countries, e.g. Germany: 7.4% poor HTM, 24.8% wealthy HTM (Kaplan et al., 2014)

Final Remarks

We are happy of having the first historical HFC data for the Czech Republic

- The data were collected by the Czech Statistical Office
 - And we appreciate a very good collaboration of our institutions

Data access for independent research:

- upon request (after harmonisation and various checks, expected by the end 2022/ beginning 2023)
- currently available: wave 2017 (22 countries) and earlier waves
